

FOR IMMEDIATE RELEASE: 1 September 2007

HA Design Group Finishes the Subtitling System for VOA – TV.

Washington, DC – 1 September 2007 -- HA Design Group LLC has completed the project for designing, project management of the installation, and training for the Subtitling Systems for the Voice of America Television (VOA TV). The system allows VOA-TV to utilize programming for one country in another country or language group by adding subtitling to the program. The unit currently has two stations and can be expanded to any number of workstations. The system allows the translators to simply type in the translation into the workstation, while watching it on the same screen. The finalized file is then used at the conforming station and a final copy is made with the subtitling applied precisely in time with the original language.

The Voice of America (VOA) broadcasts on radio and television in 45 languages to an estimated audience of more than 115 million people each week. In addition, computer users logon to VOA's Internet site ([www.VOAnews.com](http://www.VOAnews.com)) for news and information.

VOA-TV produces programs in more than 20 languages, including news reports, feature magazines, and live call-in shows. TV broadcasts include original and acquired programs that reflect American life along with discussions on United States foreign and domestic policies. VOA's Internet provides continually updated news and information with photos, audio and video. RSS feeds and Podcasts are also available.

About HA Design Group LLC

HA Design Group is an engineering firm that is driven to give our customers the best in design, engineering, and workflow practices. To give them a design that looks at important technical, operational, and business considerations. We look at innovative approaches to solve today's problems that broadcasters face using the latest in technology. For further information, visit [www.hadesign.net](http://www.hadesign.net).
